Masters in Comparative Financial Studies (by coursework)

Introduction

The aim of the programme is to develop students' financial management skills from the conventional and Islamic perspective. It provides students with both theoretical and applied concepts to develop necessary technical skills and integrate them within a strategic focus of any relevant organization. Besides providing students with the conventional knowledge, in each module technical skills are taught from Islamic perspective as well, so that students make financial decisions within the limitations set by Islamic principles. Thus, the Master in Comparative Financial Studies will increase student’s knowledge and skills in financial management disciplines, while also exposing students to the Shariah guidelines in specific areas of finance. This programme focuses on analysing financial management theory and practice from various perspectives. The programme provides in-depth understanding of conventional and Shariah knowledge to prepare the students to specialise in conventional and Islamic finance.
